# Practical - 5

**Aim: File handling using PHP.**

Solution:
```php
<?php
    $myfile=fopen("5.txt","w") or die("Unable to open the file!");
    $a="PHP originally stood for Personal Home Page.<br>";
    fwrite($myfile,$a);
    echo readfile("5.txt");
    fclose($myfile);
?>
```

OUTPUT:

PHP originally stood for Personal Home Page.
48

WORD FILE:

5 - Notepad

File   Edit   Format   View   Help

PHP originally stood for Personal Home Page.
